Minor

This report lists issues found by automated checks (axe-core 4.10). Automated checks find only some kinds of accessibility problems. The checklist at the end covers things a person should review. This report is not legal advice and does not confirm that the site meets any standard or law.

## Critical (11) — Blocks some people from using the page at all.

### Critical Images without a text description

8 elements on 2 pages · rule `image-alt` · [Images must have alternative text](#)

**How to fix:** Add an alt attribute that says what the image shows or does, e.g. `alt="Team photo at the 2025 summit"`. If the image is purely decorative, use `alt=""` so screen readers skip it.

Where:

- `.hero img` on `/`
- `.menu-card:nth-child(2) img` on `/`
- `.gallery img:nth-child(1)` on `/menu`
- `.gallery img:nth-child(4)` on `/menu`

### Critical Form fields without a label

2 elements on 1 page · rule `label` · [Form elements must have labels](#)

**How to fix:** Connect a `<label for="id">` to each input, or wrap the input in its label. Placeholder text alone doesn't count as a label.

Where:

- `#phone` on `/order`
- `#notes` on `/order`

### Critical Buttons with no readable name

1 element on 1 page · rule `button-name` · [Buttons must have discernible text](#)

**How to fix:** Put text inside the button, or add `aria-label` to icon-only buttons (e.g. `aria-label="Open menu"`).

Where:

- `.qty-plus` on `/order`

## Serious (13) — Makes the page very hard to use for some people.

### Serious Text that's hard to read against its background

10 elements on 2 pages · rule `color-contrast` · [Elements must meet minimum color contrast ratio thresholds](#)

**How to fix:** Darken the text or lighten the background until the contrast ratio is at least 4.5:1 (3:1 for large text). Grey placeholder and footer text are the usual suspects.

Where:

- `.tagline` on /
- `footer .small` on /
- `.price` on /menu

### Serious Links with no readable name

2 elements on 1 page · rule `link-name` · [Links must have discernible text](#)

**How to fix:** Give every link visible text, or an aria-label if it's an icon (for example a social icon: `aria-label="Instagram"`).

Where:

- `.social a:nth-child(1)` on /

### Serious Page has no title

1 element on 1 page · rule `document-title` · [Documents must have a title element](#)

**How to fix:** Add a descriptive `<title>` in the page head, e.g. "Pricing – Acme Plumbing".

Where:

- `html` on /order

## Moderate (3) — Causes friction; worth fixing soon.

### Moderate Headings skip levels

3 elements on 2 pages · rule `heading-order` · [Heading levels should only increase by one](#)

**How to fix:** Don't jump from an H2 straight to an H4. Use heading levels in order so the page outline makes sense; change the style with CSS instead of picking a smaller heading.

Where:

- `h4.section-title` on /menu
- `h4.team` on /about

## Needs a human review

- Can someone use the main menu, forms and checkout with only a keyboard, and always see where focus is?
- Does each image's description actually say what matters about it (not just a file name)?
- Do videos have accurate captions, and audio a transcript?
- When a form has an error, is it clear what went wrong and how to fix it?
- Does the page still work when zoomed to 200% or viewed on a narrow phone screen?

- Do pop-ups, sliders and animations stay under the visitor's control (pause, close with Esc)?
